OBJECTIVE:
To obtain an entry level Developer position with a successful and motivated software team

EDUCATION:

Bachelor of Science, Computer Science   Fall 2014 – Summer 2019
University of North Georgia, Dahlonega, GA

    o Agile / Scrum and OOP Emphasis based in Java

CONTINUING EDUCATION:
Independent study of Python, Java, HTML, CSS, and JavaScript through LinkedIn Learning, Pluralsight and official documentation

PROJECTS:
CSCI 4950 Senior Project:
Developed an Android App that allows for the creation of unique users who can create and store exercise regiments and diet plans. Utilized a cloud based database (Firebase) to store user data, as well as handle user creation, deletion, password reset, and authentication. API calls to online JSONs were utilized to populate nutrition facts for food objects and exercise information for exercise objects. MVC was implemented to facilitate the creation of Activities representing 5 pages for the user to interact with

CSCI 4200 Advance Software Engineering:
Creation of a basic lexical analyzer within Java and independent research of a randomly assigned language (F#) and creation of two programs (palindrome checker and average number checker) demonstrating knowledge of F#

CSCI 3450 Intelligent Systems:
Created a python project in an Anaconda VM utilizing OpenCV and Tensorflow that could accurately identify Uno cards in real time using a webcam

Personal Projects:
Creation of a "SHMUP" style game utilizing the pyGame library. Includes sprites and sound assets, splash screens and a high score tracker that persists between program lifecycles.

TECHNICAL SKILLS:
  Programming Languages:
    Java, C#, Python, F#, XML, SQL

  Software and Frameworks:
    IntelliJ, Visual Studio, VS Code, pyCharm, Android Studio, mySQL, Git, JSON, FireBase, Tensorflow
